California Blackouts a Warning for States Ramping Up Green Power

State has struggled to keep lights on during heat wave that has exposed its difficulties matching power demand with supply

Le Point

Quand trop d'énergies renouvelables privent la Californie... d'électricité

L'État a tellement privilégié l'éolien et le solaire que les opérateurs doivent procéder à des coupures de courant, en l'absence de vent et de soleil.

FINANCIAL TIMES

Opinion **Inside Business**

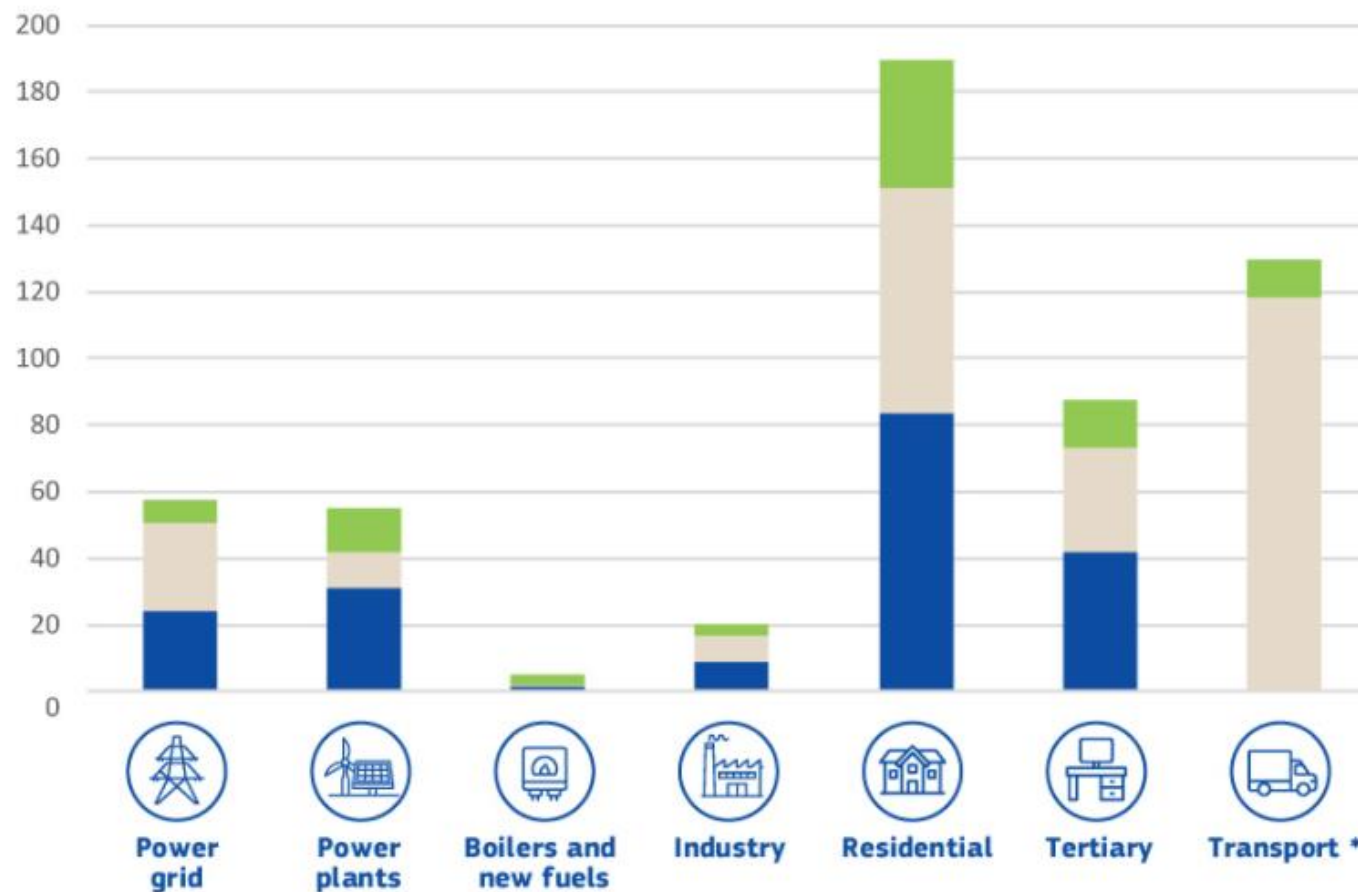

Green ambition has short-circuited California's power supply

Approaching energy transition piecemeal can expose system's fragility and lead to higher prices

Average annual investments 2011-2020 and additional investments 2021-30
 under existing policies and to achieve -55% greenhouse gas emission reductions
 (in billion EUR 2015)

European Commission
 (2020). EU-wide
 assessment of NECPs

- Additional to achieve -55% greenhouse gas reductions, 2021-2030
- Additional under current 2030 policies in 2021-2030 compared to 2011-2020
- Historic annual investments in the energy system 2011-2020

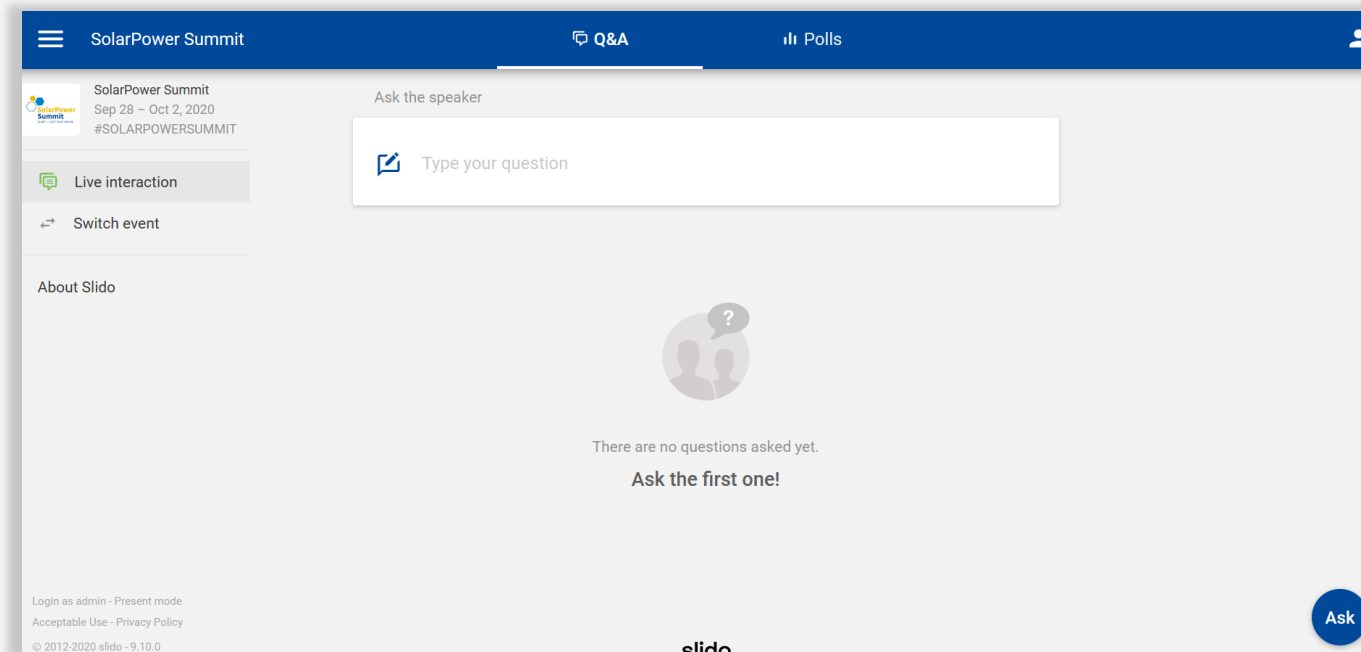

* transport only shows additional investment
